INNOVATIONS

Sunu Band®

The way we see it, every day is independence day.

Using radar and haptic feedback, Sunu Band is an intelligent travel aid which enables people who are blind and visually impaired to confidently and independently explore the world.

The Sunu Band is a modern and sleek, smart mobility wristband that uses ultrasonic technology to detect and alert you to navigational obstacles up to 14 ft. away.

Features

- Used as a supplement to the white cane, you'll enjoy improved spatial awareness and the personal freedom of knowing where you are and what's around you.
- Powerful navigation sensors and haptic feedback inform how near, or far, navigational obstacles are to the user, thus reducing accidents to the body, chest, arms, and head.
- Easy interface with touch panel and gesture recognition control.
- Includes free download of the Sunu App.
- Conveniently tell time, set discreet vibratory alarms, and track physical activity and other fitness metrics.
- Explore unfamiliar places with Sunu Band's haptic compass, place finder/explorer and GPS navigation.
- Sunu Band's sleek design features an adjustable, black sports wristband with teal accents.

Sunu Band and other **APH Innovations** products are not available for purchase with quota funds.

Note: The Sunu Band is not a regulated safety device, and should not be used as a replacement of existing visual aid systems.

Please visit **aph.org** to order, to learn more about this product, or to find related products.
